

# Hunter Spec sheet

## Specifications and runtime:

High efficiency electro-circuit;  
Output / Runtime: 230 lumen @ 150 minutes  
Construction: Aircraft grade aluminum CNC machined,  
hard anodized finish;  
O-ring sealed;  
high transparency optical lens;  
Switch: Tactical button switch;  
Auto strobe ability, The frequency of strobe is about 5Hz;  
charge and recharge protected Li-ion battery:

### Size:

Bezel: 34mm;  
Body: 26.5mm;  
Length: 143mm;  
Weight (including battery): 180g

**Directions:** Click on slightly for momentary on and slightly click to access all 3 brightness levels. Push down the button all the way at any point to run the light in that mode. Once the light is off for a period of time it will go back to the default setting high.

**Charger and battery:** The charger supports 18650 batteries. Runtime for a fully charged battery is 150 minutes. The average lifetime of the battery is the equivalent of 500 cycles. The light can also run on 2 cr123 Lion batteries as well. Full charge will take up to 3 hours.

### Notes:

Do not charge other batteries other than the ones included with your light. Do not try to charge non rechargeable batteries in your charger. It is recommended that you do not leave batteries in the charger for more than 12 hours. The battery has a protected discharge circuit.
